Read the instructions on the ANSWER SHEET and fill in your NAME, SCHOOL and OTHER INFORMATION.

Use a pencil. Do NOT use a coloured pencil or a pen. Rub out any mistakes completely.

You MUST record your answers on the ANSWER SHEET.

Mark only ONE answer for each question.

Your score will be the number of correct answers.

Marks are NOT deducted for incorrect answers.

There are 4 MULTIPLE-CHOICE QUESTIONS (1–4).

Use the information provided to choose the BEST answer from the four possible options.

On your ANSWER SHEET fill in the oval that matches your answer.

There is 1 FREE-RESPONSE QUESTION (5).

Write your answer in the boxes provided on the ANSWER SHEET and fill in the ovals that match your answer.

You may use a ruler and spare paper.

A CALCULATOR is required.
1. The diagram below represents the products of \((x + 5)\) and \((3x + 2)\).

\[
\begin{array}{c|c|c}
& 3x & 2 \\
\hline
x & \quad & \\
x + 5 & \quad & 5
\end{array}
\]

What product is represented by the shaded rectangle?

(A) \(2x\) \\
(B) \(6x\) \\
(C) \(x^2\) \\
(D) \(3x^2\)

2. Jules has a package gift-wrapped, as shown.

What is the volume, in cm\(^3\), of the package?

(A) 50 \\
(B) 300 \\
(C) 1400 \\
(D) 3000

3. During 2001, Australia exported goods to a total value of $123,000 million. The graph shows the percentage of these goods exported to different parts of the world.

What was the value, in millions of dollars, of the goods exported to China?

(A) 7,380 \\
(B) 12,300 \\
(C) 14,760 \\
(D) 23,370
4. Jane was tossing a coin, but one side of the coin was weighted more heavily than the other. 

Here are the results she obtained.

<table>
<thead>
<tr>
<th>Tosses</th>
<th>Heads</th>
<th>Tails</th>
</tr>
</thead>
<tbody>
<tr>
<td>100</td>
<td>67</td>
<td>33</td>
</tr>
<tr>
<td>500</td>
<td>286</td>
<td>214</td>
</tr>
<tr>
<td>1000</td>
<td>581</td>
<td>419</td>
</tr>
<tr>
<td>5000</td>
<td>2989</td>
<td>2011</td>
</tr>
</tbody>
</table>

Based on her results, which of these is the best estimate of the probability of getting a head in a single toss of Jane’s coin?

(A) 0.4  
(B) 0.5  
(C) 0.6  
(D) 0.7

5. In the diagram $H$ represents the position of a hawk hovering above the ground, and $M$ the position of a mouse on the ground.

The mouse moves to a new position $N$, which is 50 m from position $M$.

What is the maximum possible distance, in m, from $H$ to the new position $N$ correct to the nearest whole number?

HOW TO FILL OUT THIS SHEET:

- **USE A PENCIL**
- Print your details clearly in the boxes provided.
- Make sure you fill in only one oval in each column.
- Rub out all mistakes completely.
- Do not use a coloured pencil or pen.

TO ANSWER THE QUESTIONS

MULTIPLE CHOICE
Questions 1 to 4

Example: $4 + 6 =$

(A) 2
(B) 9
(C) 10
(D) 24

The answer is 10, so fill in the oval □, as shown.

FREE RESPONSE
Question 5

Example: $6 + 6 =$

- The answer is 12, so WRITE your answer in the boxes.
- Write only ONE digit in each box, as shown, and fill in the correct ovals, as shown.

USE A PENCIL
DO NOT USE A COLOURED PENCIL OR PEN

| 4        | C   | Experimental Probability equals: \[
\text{Number of times an event has occurred} \over\text{Number of trials}
\]

Applying this formula:
\[
\frac{67 + 286 + 581 + 2989}{100 + 500 + 1000 + 5000} = 0.59
\]
Therefore, the best estimate is 0.6. | Chance and Data | Medium |
Apart from reading 3D coordinates the main mathematics in this question is Pythagoras' Theorem.

If we look at the mouse and the hawk from above we would see this:

The line shows the hawk's path. The distance along the ground of this path (the horizontal component) is $\sqrt{100^2 + 50^2}$. This is about 111.8 m. The mouse runs 50 m away from the hawk to a new position 'N'. The mouse can run in any direction but wants to maximise the distance from the hawk. This means he should run in the same direction as the line NH in the diagram below.

Along the ground this gives a distance of $111.8 + 50 = 161.8$ m.

This is just the horizontal distance. Fortunately for the mouse, the hawk is further away than that because it is hovering above the ground at a height of 100 m.

We can show this on a new diagram from a different point of view.

We can now use Pythagoras' Theorem again to find the distance from the hawk to the mouse.

This gives an answer of 190.2 m. To the nearest whole number this is 190.

Comment

The underlying mathematics in this problem is not very difficult and boils down to two instances of Pythagoras' Theorem. As a problem, though, the question is more difficult. Students have to realise that Pythagoras' Theorem is the appropriate piece of mathematics to use and have to extract information presented in an unusual way. Also some insight is required to understand in what direction the mouse should run.
